

EasyDECON™ DF200 Decon Solution

COSEM is proud to be an authorized agent for USA Intelagard, Inc. in Singapore, Asia and the Middle East.

Intelagard's EasyDECON™ DF200 Decon Solution is ideal for decontamination operations by expanding the solution, providing even coverage, maximizing contact time with the contaminant providing visual reference for coated surfaces and suppressing agent off-gassing while decontamination takes place. It is an environmentally friendly, non-chlorine based formula registered with the EPA which is capable of killing or neutralizing a broad range of WMD contaminants.

A unique feature of Intelagard's EasyDECON™ DF200 Decon Solution is its ability to keep the component parts separate until ready to use. This is feasible by virtue of Intelagard's patented "mix on demand" technology which combines the formula as it is deployed.

Specifications:

Available quantities : 5-gallon pail kits;
100-gallon drum kits; &
500-gallon tote kits.

Effectiveness : When used as directed, EasyDECON™ DF200 is proven to achieve a 7-log kill (99.99999%) against biological weapons of mass destruction.

Non-corrosive and adds no environmental load to the appropriate clean up operation.

Kill time ranges from minutes after application to 30 minutes, depending on the agent and environmental conditions.

Unique ability to adhere to vertical and even inverted surfaces, creating a foam blanket between agent and the decontamination formulation.
