

Forward Command Vehicle (FCV)

The Forward Command Vehicle (FCV), as the name implies, is a uniquely designed coach that can be forward deployed for Command and Control of incident/s at or near the disaster scene. The FCV is unique in that it is a customized vehicle with built-in expandable features and compartments on each side to enable speedy deployment and setup as well as recovery operation.

With the FCV, ample workspace is provided through the expansion feature of the vehicle. It provides approximately 36m² of air-conditioned working space, which is more than twice its size in closed configuration. This allows for not only additional equipment but also more personnel to work comfortably in close proximity of the incident site.

Specifications:

Length	: 9,270 mm
Height	: 2,565 mm
Breadth	: 2,400 mm
Maximum Laden Weight	: 16,000 kg
