

Station With Immediate First-Aid (SWIFT) Vehicle

With every second counts in life saving mission, SWIFT is an innovative, first of its kind vehicle that has been specially designed with such notion in mind. This purpose built bus provides almost instantaneous medical facilities for management of mass casualties at disaster scene.

SWIFT is much more than a typical on-site First-Aid Post for it is equipped with built-in suction system, oxygen concentrator and even water needed for cleaning the wounds of casualties. The numerous vehicular storage compartments carry medical supplies and equipment and are within easy reach for Paramedics in treating casualties. These special features enable it to be aptly utilized as an Accident and Emergency Station in handling mass casualty situation at the disaster scene.

Upon reaching the disaster zone, SWIFT, as the name implies, can be swiftly set up in just 5 minutes to treat casualties, including those severely injured, thereby significantly increasing their chances of survival. Such swift deployment is feasible as the purpose-built vehicle is fully mechanized. This resulted in a substantial reduction of manpower needed for such set-up, from 12 men to merely a 2-men operation.

Specifications:

Length	: 8,100 mm
Height	: 3,300 mm
Breadth	: 2,500 mm
Maximum Laden Weight	: 10,400 kg
